GENERAL CHARACTERISTICS OF THE WORK

Master's thesis: 59p, 2 figures, 23 tables, 32 sources.

PUBLIC HOSPITALS, FINANCIAL MANAGEMENT, FINANCIAL RISK EVALUATION, ANALYTIC HIERARCHY PROCESS, EFFICACY COEFFICIENT METHOD

The aim of the study is to develop a system of financial risk management measures for public hospitals in China.

In order to achieve the above stated goal, the following **objectives** have been developed:

to explain the theoretical basis and theories of public hospitals' financial risk management, and provide theoretical support for public hospitals' financial risk evaluation;

to analyze the existing financial analysis and reasons based characteristics of public hospitals and financial systems in China;

to select financial risk assessment indicators suitable for public hospitals in China, use the analytic hierarchy process to determine the weights, and establish an assessment system;

to applied the constructed financial risk assessment system in ZJ Hospital, and the efficiency coefficient method is used to calculate the financial risk result of ZJ Hospital.

to put forward suggestions to reduce financial risks from the perspective of the hospital itself and the government.

Object of the research: ZJ hospital

Subject of the research: Financial risk management in public hospitals

Research methods: Analytic hierarchy process, efficacy coefficient method

Realm of the possible practical application: the constructed financial risk evaluation system can be used to evaluate the financial risks of public hospitals in China.

The author of the thesis confirms that the computational and analytical material provided in the thesis reflects the state of the process under investigation correctly and objectively, and all theoretical, methodological and methodical provisions and concepts are referenced to their authors.
