## **CURRICULUM**

Rector Belarusian State University

A

- XX

30 m

13

Andrei D. Karol

Registration number 831a-122/yr

2 52019 г.

22

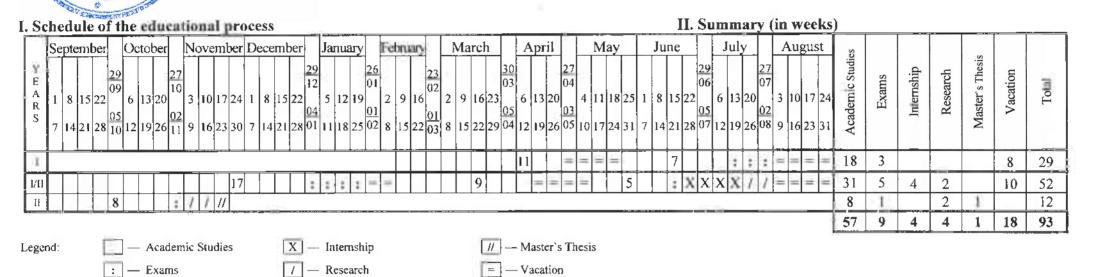

2019 г.

for foreign students

Speciality: 1-31 80 20 Applied physics

**Profiling: High-Current Electronics** 

Degree: Master Period of Study: 1 year 8 months Form of Education: full-time

**III.** Curriculum

## VII. Competence Matrix

| Competence<br>Code | Competence   | Module Code<br>Discipline<br>Code |
|--------------------|--|-----------------------------------|
| UC -1              | Abilities to use the scientific cognition techniques (analysis, comparison, systematization, abstracting, modeling, data verification, decision-making, etc.) in independent research activities, to generate and to realize innovative ideas  | 1.1.1-1.1.4, 1.3                  |
| UC -2              | Abilities to solve practical tasks using the knowledge acquired in theoretical physics; to realize the professional research and technological activities; to comprehend creatively scientific engineering and design information: to analyze the process of solving scientific and technological problems | · · · · · ·                       |
| UC -3              | Ability to use the fundamental mathematical knowledge for data analysis and verification, estimation of information completeness in the process of professional activities; if required to find or synthesize insufficient information; to realize the activities in conditions of uncertainty             | 1.2.1, 1.2.2, 1.                  |
| UC -4              | Ability to realize pedagogical activities in educational institutions; to master and introduce the effective educational and information communication technologies,   | 3.1                               |
| UC -5              | Mastering scientific cognition methods; ability to analyze the content and level of philosophical-methodological problems when accomplishing the tasks of research and innovative activities   | 4.1                               |
| UC -6              | Mastering of foreign languages for communication in interdisciplinary and research fields, in different forms of international collaboration, research and innovative activities   | 4.2                               |
| UC -7              | Skills to use advanced information technologies for solving of research and innovative problems  | 4.3                               |
| DPC -1             | Ability to use the methods of theoretical physics for description of condensed matter, to apply the acquired knowledge in the process of independent design and development work, to extend the competence to new fields of modern technologies  | 1.1.1                             |
| DPC -2             | Abilities to analyze and professionally use modern methods of thermodynamics and statistical physics, to perform analytical and numerical calculations, to use the   | 1.1.2                             |
| DPC -3             | Ability to use the achievements of modern physics for solving of applied problems; using of theoretical techniques to analyze behavior of nonlinear dynamic systems  | 1.1.3                             |
| DPC -4             | Ability to use the methods of vibration and wave theory for description of real systems and energy processes in these systems  | 1.1.4                             |
| DPC -5             | Ability to construct and to refine mathematical models of physical phenomena, to realize them with the use of advanced information technologies; to analyze the proposed product in context of the latest achievements of mathematical modeling  | 1.2.1                             |
| DPC -6             | Ability to understand and to apply professionally the computational experiment techniques; to perform efficient numerical computations within models for description of physical objects and processes   | 1.2.2                             |
| SC -1              | Ability to analyze and use in their professional activities the contemporary methods of creation of high voltage generation devices, to carry out appropriate analytical and numerical developments  | 2.1.1                             |
| SC -2              | Ability to design and conduct physical experiments, to use contemporary methods of physical research and physical measurements   | 2.2.1                             |
| SC -3              | Ability to choose electronic techniques for pulse high voltage generation fitted to assigned task, to use the results of analytical and numerical developments for pulse high voltage generation devices to create new technical objects and technologies  | 2.2.2                             |

| Competence<br>code | Competence   | Module Code,<br>Discipline<br>Code |
|--------------------|--|------------------------------------|
| SC -4              | Ability to use knowledge about the laws of electrodynamics and interactions of electron beams with matter in development of the high-current electronic technologies   | 2.2.3                              |
| SC -5              | Understanding of main principles and methods of calculation parameters and design of physical units. Adherence to the safety principles, ability to apply safety operation procedures and measures with high voltage systems, electron accelerators and microwave sources.   | 2.2.4                              |
| SC -6              | Understanding of physical sense of time and frequency measurement procedures in microwave band   | 2.2.5                              |
| SC -7              | Ability to understand the quantum nature of phenomena in high-current electronics to use this understanding for development of correspondent devices and techniques; ability to use knowledge of the physical processes underlying the interactions between laser radiation and condensed media for the development and introduction of laser material-processing technologies | 2.3.1                              |
| SC -8              | Ability to use knowledge on construction, operation principles of up-to-date spectroscopic laser devices and units   | 2.3.2                              |
| SC -9              | Ability to use modern spectroscopic laser systems in research, technology, and medicine  | 2.3.3                              |
| SC -10             | Ability to use the concepts laser physics in science and technical developments  | 2.4.1                              |
| SC -11             | Ability to use, operation laser emission methods in experimental research  | 2.4.2                              |
| SC -12             | Ability to choose the type of microcontroller systems for automation processes and control in high-current electronics   | 2.5.1                              |
| SC -13             | Ability to use the knowledge of physical processes at high energy densities to develop and testing the high current pulse electronics devises and to create powerful pulse electromagnetic radiation sources   | 2.5.2                              |
| SC -14             | Ability to produce and specify software for microcontroller systems using for automation processes and control in high-current electronics   | 2.5.3                              |

It is developed on the basis of the standard curriculum, approved 21.03.2019 г. (Registration number № G 31-2-012/пр.-тип.)

<sup>1</sup> The enumerated moduli and their contents are annually revised and qualified by the Faculty Council in accordance with the proposals of the relevant departments and personnel recruiting organizations.

<sup>2</sup> Series of Disciplines for Candidate Exams and Additional Training «Philosophy and Methodology of Science», «Foreign Language», «Information Technologies: Basics» are studied according to the choice of a student.
